

EXPLORING EXCELLENCE

Which american states are the more consistent in crafting **top-quality beer**? We can visualize this thanks to the *Excellence Index (EI)*: a weighted average of the medals won by each state. Analyzing how this index changes with respect to the total number of medals won gives us insights about each state level of excellence. On the **top-right** side of the plot we can find states which are above average in both quantity and excellence whereas in the **bottom-left** corner there are below average states. Y-axis is logarithmic.
